

PRESS RELEASE

TMW PowerSuite™ offers street-level mapping **New interface to PC*Miler®/Streets 2000 gives routing, mileage and mapping**

TMW Systems, Inc., a leading developer of operations software for the trucking industry, announced that their PowerSuite dispatch enterprise management operations system now lets carriers give even better customer service (internal and external) with a new interface to ALK's PC*Miler/Streets 2000 program. Drivers experience less frustration with turn-by-turn driving directions. Dispatchers have access to unlimited within-city stop optimization, and user-customizable routing. They also receive detailed street-level maps with truck restrictions and one-way designations. Shippers obtain faster, more efficient service—and happier drivers delivering the goods.

Because the interface is seamless with PowerSuite, carriers save hours of time by cutting out data reentry and using batch processing and mileage/drive time calculation for large volumes of trip and location data. The system also eliminates manual trip entry and automatically re-sequences stops and runs trips. Dispatchers click right from the dispatch screen to the street map; no need to key in addresses.

"We are extremely pleased to work with TMW's clients and help them enjoy the benefits of our system through the new interface to PowerSuite," says Craig Fiander, Product Manager at ALK. "Because TMW was clearly focused on the benefits their customers would gain, they completed their development as quickly as possible." With access to a total of more than 6 million street-level miles and over 1 million highway miles, TMW PowerSuite clients now have total integration to one of the industry's most comprehensive mileage and mapping systems.

"With the street-level mapping interface TMW clients obtain a more accurate representation of actual vehicle and fleet mileage for rating, payroll and reporting purposes," says Tom Weisz, TMW CEO and President. **"Our whole purpose is to make life easier for our clients so they can make life easier for their customers.** As shippers demand more information, we address the means to help our clients deliver what they want, just the way they want it."

Founded in 1983, TMW Systems is a leading developer and integrator of operations management software for the transportation industry. They serve 500+ trucking industry clients of all types and sizes. They help transportation and logistics companies leverage the technologies of their choice to easily collect, analyze and use information for delivering improved productivity and better customer service. Their dispatch product lines include TL2000™ for the IBM AS/400 and PowerSuite for Windows client/server architecture. TMW has been named to the Weatherhead 100 (an award given by the Case Western Reserve University Weatherhead School of Management recognizing the 100 fastest growing companies in Northeast Ohio) for the past seven consecutive years.
